

HTML 4.0 Intermediate

Duration: 1 Day

Course Overview:

This informative one-day course is designed to expand on the introductory concepts of designing Web pages for Internet or intranet usage. Students attending this course will learn how to effectively integrate text and graphics, create lists and special symbols, work with transparent images, and create image maps. In addition, considerable hands-on experience will be devoted to the significance and usefulness of creating and formatting tables in Web pages.

Students Learn To:

- Create lists and character entities
- Create graphic hyperlinks
- Integrate text and graphics
- Add transparency and animation effects to images
- Create and use image maps
- Create and format tables

Who Should Attend: Anyone who is interested in creating or maintaining Web pages for business and/or personal use.

Prerequisites: HTML 4.0 Introduction or equivalent knowledge.
